SPECIAL SECTION ON ADVANCED DESIGN AND CONTROL OF SWITCHED RELUCTANCE MACHINES

Guest Editorial ..................................................... B. Fahimi 2910

SPECIAL SECTION PAPERS

Design of an SRM Speed Control Strategy for a Wide Range of Operating Speeds ............................................. H. Hannoun, M. Hilairet, and C. Marchand 2911

Gain-Scheduling Regulator for High-Performance Position Control of Switched Reluctance Motor Drives ............. C. Mademlis and I. Kioskeridis 2922

State-Switching Control Technique for Switched Reluctance Motor Drives: Theory and Implementation .............. S. M. Lukic and A. Emadi 2932

Calculation of the Acoustic Noise Spectrum of SRM Using Modal Superposition ............................................. J. O. Fiedler, K. A. Kasper, and R. W. De Doncker 2939

Rotor-Position Estimation of Switched Reluctance Motors Based on Damped Voltage Resonance .................. K. R. Geldhof, A. P. M. Van den Bossche, and J. A. Melkebeek 2954

An Accurate Inductance Profile Measurement Technique for Switched Reluctance Machines .................. P. Zhang, P. A. Cassani, and S. S. Williamson 2972

Multi-Objective Optimization Design of In-Wheel Switched Reluctance Motors in Electric Vehicles ................ X. D. Xue, K. W. E. Cheng, T. W. Ng, and N. C. Cheung 2980

Design and Optimization of a Switched Reluctance Motor Driving a Compressor for a PEM Fuel-Cell System for Automotive Applications ................. T. Raminosoa, B. Blunier, D. Fodorean, and A. Miraoui 2988

PAPERS

Multiphase Systems

Real-Time Simulation of Grid-Connected Wind Farms Using Physical Aggregation ........................................ V. Jalili-Marandi, L.-F. Pak, and V. Dinavahi 3010

Optimum Design of Interphase Reactor With Double-Tap Changer Applied to Multipulse Diode Rectifier ................ S. Yang, F. Meng, and W. Yang 3022

(Contents Continued on Page 2909)
Machines and Drives

Single-Phase Electronics

Snubberless Bidirectional DC–DC Converter With New CLLC Resonant Tank Featuring Minimized Switching Loss ................................................................................. W. Chen, P. Rong, and Z. Lu

High-Performance Feedback Control of Electromagnetic Vibratory Feeder ........................................................................... A. I. Ribić and Ž. V. Despotović

Nonresonant and Resonant Frequency-Selectable Induction-Heating Targets ........................................................................... J. I. Rodríguez and S. B. Leeb

Analysis and Applications of Parasitic Capacitance Cancellation Techniques for EMI Suppression ........................................... S. Wang and F. C. Lee

Renewable Energy System

Highly Efficient Single-Phase Transformerless Inverters for Grid-Connected Photovoltaic Systems ........................ S. V. Araújo, P. Zacharias, and R. Mallwitz

Actuators and Motors

Control and Signal Processing

Hybrid $H^\infty$-Based Wavelet-Neural-Network Tracking Control for Permanent-Magnet Synchronous Motor Servo Drives ................................................................. F. F. M. El-Sousy

Neural-Network-Based Low-Speed-Damping Controller for Stepper Motor With an FPGA ................................................................................................. Q. N. Le and J.-W. Jeon

Contactless Energy Transfer System With FPGA-Controlled Resonant Converter ............................................................. A. J. Moradewicz and M. P. Kazmierkowski

A New Control Method for Power-Assisted Wheelchair Based on the Surface Myoelectric Signal ................................ Y. Oonishi, S. Oh, and Y. Hori

A Single-VCO Fractional-N Frequency Synthesizer for Digital TV Tuners ................................................................. Y.-C. Yang and S.-S. Lu

Intelligent Systems

Solar-Powered Automated Road Surveillance System for Speed Violation Detection ......................................................... T. Celik and H. Kusetogullari

Networking

Stable and Transparent Time-Delayed Teleoperation by Direct Acceleration Waves ............................................................................... B. Yalcin and K. Ohnishi
